# Welcome

These are the Lecture Notes of **Differential Geometry 661955** for T1 2023/24 at the University of Hull. We will study curves and surfaces in  $\mathbb{R}^3$ . I will follow these lecture notes during the course. If you have any question or find any typo, please email me at

[S.Fanzon@hull.ac.uk](mailto:S.Fanzon@hull.ac.uk)

Up to date information about the course, Tutorials and Homework will be published on the University of Hull **Canvas Website**

[canvas.hull.ac.uk/courses/67594](https://canvas.hull.ac.uk/courses/67594)

and on the **Course Webpage** hosted on my website

[silviofanzon.com/blog/2023/Differential-Geometry](https://silviofanzon.com/blog/2023/Differential-Geometry)

## Readings

The main textbook of the course is Pressley [5]. Other interesting readings are the books by do Carmo [2] and Bär [1]. I will assume some knowledge from Analysis and Linear Algebra. A good place to revise these topics are the books by Zorich [6, 7].

## Visualization

It is important to visualize the geometrical objects and concepts we are going to talk about in this course. I will show basic Python code to plot curves and surfaces. This part of the course is **not required** for the final examination. If you want to have fun plotting with Python, I recommend installation through [Anaconda](#) or [Miniconda](#). The actual coding can then be done through [Jupyter Notebook](#). Good references for scientific Python programming are [3, 4].

If you do not want to mess around with Python, you can still visualize pretty much everything we will do in this course using the excellent online 3D grapher tool [CalcPlot3D](#). To understand how it works, please refer to the [help manual](#) or to the short [video introduction](#).

**!** You are not expected to purchase any of the above books. These lecture notes will cover 100% of the topics you are expected to know in order to excel in the final exam.

# 1 Introduction
